

Peter Mbugua

SOFTWARE ENGINEER | FULL-STACK JAVASCRIPT

Kirinyaga | 0768533008 | petrembugua@gmail.com | mbugua.nijue.me

Software Engineer with hands-on experience designing, building, deploying, and maintaining full-stack web applications. Experienced with React, Next.js, Node.js, databases, APIs, cloud deployment, Git, and production troubleshooting. Founder and lead developer of Bowl Technologies, where I developed BowlRMS from concept through production, working across application architecture, payments, inventory, real-time operations, and product development. The goal is to excel in everything I do, however humble or great.

Technical skills

- **Languages & Frameworks:** JavaScript, TypeScript, SQL, React, Next.js, Node.js, HTML/CSS
- **Backend & Data:** Supabase, PostgreSQL, Firebase, API Development
- **DevOps & Infrastructure:** Git, GitHub, Vercel, Bunny.net, Google Cloud, Ubuntu/Linux
- **Regional Payments:** M-Pesa Daraja API, Paystack, Tuma Online
- **AI Development Tools:** Claude Code, GitHub Copilot, Continue Extension, Microsoft Foundry
- **Design:** UI/UX Design, Visual Design

Experience

Bowl Technologies | Software Engineer

2024 – Present

Select Products

BowlRMS - Full-stack restaurant management platform

- Led end-to-end development of BowlRMS, a full-stack restaurant management platform covering digital menus, ordering, payments, inventory, staff operations, and customer-facing experiences.
- Designed and implemented full-stack web application architecture using React, Next.js, Node.js, and Supabase.
- Designed database structures and application data flows supporting multi-tenant restaurant operations.
- Built API integrations and third-party payment services including M-Pesa, Tuma, and Paystack.

- Implemented inventory and recipe management, connecting menu items to inventory consumption and financial records.
- Developed real-time operational interfaces for restaurant staff, including order and kitchen workflows.
- Managed production deployments, debugging, performance optimization, dependency resolution, and infrastructure configuration.
- Used Git/GitHub and modern development tooling throughout the software development lifecycle.
- Translated practical user and business requirements into engineering and product decisions.

nijue.me - Achievement and professional storytelling platform with verifiable proof.

- Designed and developed the platform's core user experience and application architecture.
- Built structured workflows for publishing achievements and associated evidence.
- Focused on usability, accessibility, and scalable product design.

Bidbee - Localized real-time bidding platform.

- Developed core bidding logic and real-time user interaction flows.
- Designed interfaces around dynamic pricing and user participation.
- Built the platform with consideration for localized market requirements.

Select Projects:

- **SkillMint** - Blockchain-based credential verification platform for minting, issuing, and verifying tamper-resistant skill certificates on-chain.
- **OpenKura** - Blockchain-based decentralized voting platform designed for transparent, secure, and immutable elections.
- **LearnPlus** - AI-assisted tutoring research platform exploring effects on learning outcomes and user engagement.
- **DearBits** - AI/ML-powered diabetes risk assessment and healthcare research platform.

Education

Kirinyaga University

Expected Graduation:2027

Bachelor of Technology in Electronics and Computer Engineering (Ongoing)
